

# REVOLUTIONARY AUTOMATIC FIRE SYSTEM

The revolutionary automatic gas fire extinguishing system is used to protect enclosed engine bays in diesel or petrol cars and vans, buses and racing cars. It can also be used in power plants, electrical substations, banks, households and mobile homes. It can be used by the gas industry and any company where there may be a risk of fire.

**No more stress.**  
Just use the  
Proteng and you  
will not have  
to worry about  
destruction from  
fire any more.

If a fire starts in your bus then the **Proteng system** **will automatically stop** that fire from causing any serious damage. It's an incredibly **simple system** with a simple installation.

**Proteng saves your life and your buses.**

# REVOLUTIONARY AUTOMATIC FIRE SYSTEM

The Proteng system is based on a single polyamid tube with a 18mm diameter and is 210 cm long. It contains a compressed gas extinguishing compound (FM200) called heptafluoropropan. At ambient temperatures, thanks to a pressure of 5 bars, this relatively small tube contains 500g of the compound.

## Benefits of PROTENG FM200

- Incredibly simple principle
- Extremely easy and flexible installation
- Automatically self-activating device
- No secondary effects
- Its chemical composition doesn't endanger your health
- The system doesn't require any maintenance or periodic inspection

## Manufactured to the following standards:

- ISO 9001:2008
- ISO 14001:2004
- Stable Fire-extinguishing equipment certificate
- OHSAS 18001:2007
- On January 2017 we will have also TUV SUD
